**(54) Title: GAMING SYSTEM USING SINGLE PLAYER-IDENTIFICATION CARD FOR PERFORMING MULTIPLE FUNCTIONS**

**(57) Abstract:** A gaming terminal comprises an input device for receiving a player card during a wagering game. The input device has a reading component(s) for reading at least two different media on the game card. The gaming terminal includes a display for displaying a randomly selected game outcome and information related to different functions associated with the two different media on the game card. A method of operating a wagering game comprises storing data in at least one database and receiving, at a gaming terminal, a player card from a player. The player card includes first and second distinct media. The first and second media provide information to the gaming terminal. The method includes performing a first function in response to comparing the information on the first media with the data, and performing a second function in response to comparing the information on the second media with the data.
